

NASA's Lunar Exploration Campaign: Scientific and Exploration Activities.

Steve Clarke
NASA Headquarters

Introduction: The United States has embarked upon a revitalized effort to return to the Moon with robots and humans within 5 years. This Exploration Campaign includes returning humans to the surface of the Moon while conducting new and unique science investigations on and around the Moon. The Moon will also be used as a testing ground for future systems that will enable the first human mission to the surface of Mars. Mr. Clarke will provide an update to the NASA Exploration Campaign activities and the evolving plans to accomplish the ambitious goals of returning humans to the surface of the Moon by 2024 and conducting ground-breaking science on and around the Moon.
